LAB 1 / UC-03

Coffee Kiosk Use Case Flow

Venkatesh Panda | PES1UGCS524

Scope and trigger

UC-03 Review and Pay. A customer has selected a coffee and size and opens the order review. The credit card terminal is available. Related requirements are FR-003 to FR-005, NFR-001 and NFR-002.

Main success scenario

1. The kiosk displays the coffee, size and configured price.

2. The customer confirms the order and chooses to pay by credit card.

3. The kiosk requests payment for the displayed total. The customer presents a credit card to the payment terminal.

4. The terminal returns an approval and a transaction reference. The kiosk records the order as paid with that reference.

5. The kiosk requests a printed receipt containing the order ID, coffee, size and approved total.

6. The kiosk shows confirmation and returns to the welcome screen after the customer dismisses it.

Alternate flow 4a Payment declined

1. The kiosk displays that the payment was declined and keeps the order unpaid. It retains the coffee, size and price.

2. If the customer retries, the flow resumes at step 3. If the customer cancels, the kiosk clears the pending order and returns to the welcome screen without printing a receipt.

Success postcondition

The order is paid once and one receipt is issued. The kiosk stores the transaction reference while the terminal handles card credentials.
